

ALUMI-FLASH SYSTEM

[Alumi-Flash](#) for one to four penetrations in one watertight unit. Alumi-Flash makes pitch pans obsolete! Portals Plus Alumi-Flash consists of a flexible EPDM cap w/Stainless Snaplock Clamp(s) and a one piece, spun aluminum base. The flexible EPDM cap eliminates roof leaks because penetrations can expand, contract, and vibrate independently of the roofing system. There are five different cap styles available which can accommodate a variety of round pipes, tubes, and conduits from 3/8" round through 12" round, and, with Portals Plus Adapter Rings, angle irons and square tubes, as well. The EPDM cap is mechanically sealed to the Alumi-Flash base by a double "Weather-Tite Pressure Seal", which consists of two beads formed into the collar of the base that mate with double grooves molded into the inside of the cap. The Portals Plus Alumi-Flash provides a permanent, watertight, and maintenance-free means for penetrating roofs that is simple and easy to install. [Adapter Rings](#) can modify these penetrations

NEW UPC PART NUMBER	DESCRIPTION	QTY/	LIST PRICE
		CTN	PER UNIT
23015	w/ 126 BLACK CAP (1 - 2" to 6" pipe)	5
