

ReRoof Drains

Technical Product Information

Drain inserts for retrofit applications

The Portals Plus ReRoof Drain is designed for the easiest and most reliable installation for use in conjunction with an existing drain when reroofing. The unit is based on a flat underside flange for flush roofing material installation. A special pre-compressed modified asphalt impregnated expanding foam sealing tape automatically makes a permanent elastic watertight seal to the existing drain, eliminating water back up. The rib on top of the ABS flange mates with the groove on the cast aluminum gravel guard clamping collar producing an ideal flashing lock. The flange and outlet tube are available in stainless, PVC, aluminum, or high temperature ABS. ReRoof Drains are available to fit 2", 3", 4", 5", and 6" drains.

The drain is completely installed on the roof top with NO special tools and all hardware is stainless steel. The unit is available with either plastic or cast aluminum dome strainer and the outlet tube gives minimum downsizing to the existing drain. The Portals Plus ReRoof Drain makes a perfect roofing termination point and offers an excellent connection to the plumbing below.
