

PLASTI-FLASH SYSTEM

[Plasti-Flash](#) - for one to four penetrations in one watertight unit. Plasti-Flash makes pitch pans obsolete! Portals Plus Plasti-Flash consists of a flexible EPDM cap w/Stainless Snaplock Clamp(s) and a one piece, weldable white PVC base. The flexible white EPDM cap eliminates roof leaks because penetrations can expand, contract, and vibrate independently of the roofing system. There are two different cap styles available which can accommodate a variety of round pipes, tubes, and conduits from 3/8" round through 6" round, and, with Portals Plus black Adapter Rings, angle irons and square tubes, as well. The white EPDM cap is mechanically sealed to the Plasti-Flash base by a double "Weather-Tite Pressure Seal", which consists of two beads formed into the collar of the base that mate with double grooves molded into the inside of the cap. The Portals Plus Plasti-Flash provides a permanent, watertight, and maintenance-free means for penetrating roofs that is simple and easy to install. [Adapter Rings](#) can modify these penetrations
