

ADAPTERS ONLY

[Adapter Rings and Retrofit Adapter Rings](#)- for unusual roof penetration shapes and sizes. Adapter Rings and Retrofit Adapter Rings are precision molded of 1" thick solid rubber with the core molded to fit specific non-round shapes and odd sizes, and the perimeter molded round to achieve a solid watertight transition to a standard Portals Plus flashing. Portals Plus Adapter Rings allow movement and vibration, but maintain watertight integrity for the long term with no maintenance required. Adapter Rings are the answer to leaky pitch pans and costly field fabricated metal flashings.
